## Qisqa yechimlar

**1.** BN qarshisidagi uch — D.
DR asosga tegadi, lekin qiya. NH perpendikulyar, lekin u N dan BD ga tushgan.
N burchak o'tmas, shuning uchun D dan BN ning davomiga tushgan **DQ** — balandlik.

---

**2.** RTUV to'g'ri to'rtburchak, demak T burchak to'g'ri: RT ⊥ TU.
RTU uchburchakda TU asos — qarshisidagi uch R. Balandlik — **RT** tomonning o'zi.

---

**3.** O'tmas burchak uchidan chiqqan **ikki** tomonga tushirilgan balandliklar tashqarida; uchinchisi ichida.

---

**4.** A burchak o'tmas, shuning uchun balandlik SA ning davomiga tushadi.
Balandlik N dan tik pastga o'lchanadi: N asos chizig'idan 5 katak yuqorida — **5 cm**.

---

**5.** ZA ⊥ AK.
AK asos — qarshisidagi uch Z, balandlik — ZA tomonning o'zi.
ZA asos — qarshisidagi uch K, balandlik — KA. Javob: **ZA; KA**.

---

**6.** Shaklni ikki to'g'ri to'rtburchakka bo'lamiz.
Yuqoridagisi: 9 · 2 = 18 cm².
Pastdagisi: 3 · 5 = 15 cm².
18 + 15 = **33 cm²**.

---

**7.** Kvadratning yuzi = tomoni × tomoni.
6 · 6 = 36, demak tomoni **6 cm**.
36 : 4 = 9 — xato: yuz tomonlarni ko'paytirib topiladi.

---

**8.** Kichigi: 4 · 4 = 16 cm².
Kattasi: 8 · 8 = 64 cm².
64 : 16 = **4 marta**. Tomoni 2 marta katta, yuzi esa 4 marta.

---

**9.** To'g'ri to'rtburchak: 12 · 7 = 84 cm².
Kvadrat: 3 · 3 = 9 cm².
84 − 9 = **75 cm²**.

---

**10.** OV qarshisidagi uch — N.
N dan chiqqan va OV ga perpendikulyar kesma — **NB**.

---

**11.** Pol yuzi: 30 · 15 = 450 m².
Bitta gilam: 3 · 3 = 9 m².
450 : 9 = **50 ta**. (150 — gilam yuzi 3 m² deb olingan xato.)

---

**12.** Balandlik asosga perpendikulyar: HK ⊥ GK.
HK va GK K uchida uchrashadi, demak **K burchak** to'g'ri.

---

**13.** Balandlik asosga perpendikulyar bo'lishi kerak, o'rtasiga tushishi shart emas. U asosning davomiga ham tushishi mumkin.
Noto'g'ri gap — **birinchisi**.

---

**14.** KM K uchdan chiqqan, lekin EF bilan to'g'ri burchak hosil qilmaydi (qiya).
Balandlik K dan **tik** pastga tushadi — u M ga emas, boshqa nuqtaga keladi.

---

**15.** Balandlik asos qarshisidagi uchdan tushiriladi.
EK ning uchlari — E va K, uchinchi uch — **D**. Asos almashdi — balandlik ham almashdi.

---

**16.** Birinchisi: 8 · 3 = 24 m².
Ikkinchisi: 4 · 5 = 20 m².
24 + 20 = **44 m²**.

---

**17.** Har bir burchak to'g'ri, har burchakda bir juft tomon uchrashadi.
4 ta burchak — **4 juft**.

---

**18.** GH va JK — to'g'ri to'rtburchakning qarama-qarshi tomonlari.
Ular kesishmaydi, shuning uchun **perpendikulyar emas**.

---

**19.** Kvadrat yuzi: 6 · 6 = 36 cm².
9 · eni = 36. 9 · 4 = 36, demak eni **4 cm**. (3 — 9 − 6, xato.)

---

**20.** Balandlik 3 katak, har katak 2 cm.
3 · 2 = **6 cm**. (10 cm — asos uzunligi.)

---
